

Delivery specifications

For successful fire retardancy correct delivery is important.

The delivered wood must meet the following general requirements:

1. The package must be free of mold and damage
2. Standard delivered in common profiles (four-sided planed, channel siding, tongue & groove, etc.), deviations in consultation
3. Thickness of the boards must be between 15-42 mm
4. The moisture content of the package must be between 5-22%
5. Prior to delivery the Declaration of Performance must have been sent to Hestus
6. Specifications per package must be provided in the order form

Delivered stacked wood must meet the following requirements:

7. The delivered wood may be a maximum of **110 x 110 cm** (width x height)
8. The length of the delivered wood may be a maximum of **5750 cm**
9. Boards or panels must be provided with intermediate laths per layer*
 - a. A lath must be placed every **30 cm**
 - b. The laths must be min. **18 mm** high, max. **22 mm**
 - c. The laths must be min. **18 mm** wide, max. **30 mm**
 - d. The laths may be square
 - e. For rectangular laths there must be at least **4 mm** difference between the width and the height
10. In case of deviating cross-section dimensions communicate in advance with Hestus

* Boards with a thickness between **18 – 21 mm** may be double stacked, with the visible sides facing each other.
